

ROPOX VERTIINSIDE SHELVING FOR ASSISTED LIVING

A complete shelving unit for installation in wall cabinets, controls at worktop level electrically power the shelving unit to a reachable height.

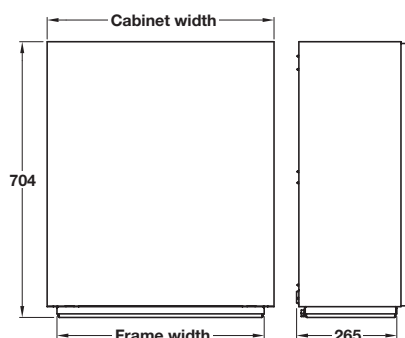

- > Electrical height adjustable shelves enable the user to easily reach items in the cabinets
- > Ideal for children, wheelchair users or simply to make it easier for anyone to reach top shelves
- > The system is especially ideal for wheelchair users as you can reach the two lower shelves without having to open the cabinet doors first
- > The Vertilnside upper cabinet system looks just like any other common kitchen cabinet system, the shelves can be adjusted by a control panel which can be integrated in the fascia
- > Replaces the back and base panels of a standard wall unit
- > We recommend double doors for cabinet widths from 600 mm to prevent the users from stepping back when opening the doors

When used over a Flexi worktop frame (as pictured above) use Smartbox 506.17.996 to interlink the safety systems, shown on page 545

Vertilnside adjustable shelves
