

Trend Professional multi-material worktop jig, 950 mm

- > A universal worktop jig for routing mitre joints in laminated, timber and compact laminate surfaces. Features 3 mm, 10 mm and 35 mm inset options, and innovative front edge alignment technology for scribed, out-of-square and non-standard worktops
- > Indexed backsets for 600, 610, 616, 620, 635, 700, 900 and 950 mm worktops for standard 90° installations
- > 400 mm radius for breakfast bar and peninsula trimming
- > R100 mm, R40 mm and 45° corners for edge finishing
- > 90° straight cuts for accurate skimming and trimming
- > 35 mm hinge / ¾" BSP recess for surface-mount monobloc tap and concealed hinge installation
- > Front edge alignment technology accurately positions the jig directly to the start of the mitre joint to accommodate any worktop width
- > Narrow Inset T-Gauges create 3 mm and 10 mm insets quickly and easily. Perfect for square-edged and modern bullnose worktops; narrow insets give a cleaner aesthetic, prevent cutter wear, and improve cordless router runtime
- > Male cut-line positioning devices allow the jig to be positioned directly to the male cut line and remove the need for complex length, angle and offset calculations. Ideal for trapped and out-of-square installations
- > Preset connector bolt recesses accommodate all standard worktop bolt sizes, including Zipbolt and Unika 'Slimline' connection bolts
- > 8 mm radius gauge ensures worktops are suitable for a 10 mm narrow inset
- > 8.65 mm marking gauge helps to perfectly position the jig for peninsula, radius and 45° corner finishing
- > CNC-machined compact grade HPL
- > Order qty: 1 pc

 Suitable guide bushes are available, shown on page **3.49C**
