

- **Modular system** allows the lock case to be premounted to the furniture before installation and the cylinders are added later
- The same cylinder core will fit all the various designs of lock case
- The combination tool on page 7 can be used to operate or test the locking mechanism of lock cores before the cylinder is added
- Cylinder cores can be installed, repositioned or replaced quickly. Removal key is needed to remove the cylinder core
- For correct locking direction cores **turn clockwise to unlock** and **anti-clockwise to lock**
- Castings and cores are marked as diagram
- When all markings are positioned identically, the doors/drawers will all operate with the same locking direction

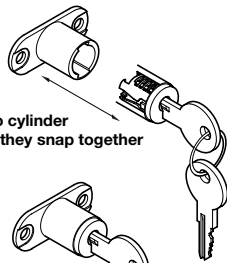

These cylinders snap into all cylinder housings without using a change tool

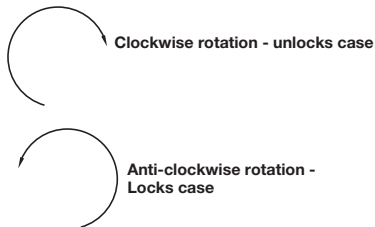

To install:  
Line up lock so that key lines up with notch in cylinder housing as shown

Insert cylinder core into cylinder housing and push until they snap together

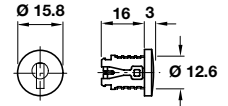

Lock is now ready to use-to remove the cylinder core the removal key must be used

### A Modular system cylinder core

- Suitable for all lock cases in the Module system
- **5 plate levers** = 200 possible key changes
- Zinc alloy with brass lever plates
- **Accessories:** 2 keys
